

SPRINT PLANNING

For this Sprint, I have decided to use Django framework as my backend service provider and I will also use its database functionalities

SPRINT REVIEW & RETROSPECTIVE

Review: I was able to complete all the task required for Sprint 3 by careful planning and daily reviews of the work that was done, I also applied JIT (Just in Time) process as part of the Sprint 3 to maximize the time I have in creating and testing the particular webpage that I have created for this Sprint 3.

Retrospective: Since the site will be used for the future of our organization I inteded to continue working on it even after this tasks for CMSC 126 is already done. Meaning I'll continue to work with the home page, services page, and about us page. This must be simpler because I already have utilized Django framework which makes the code base more scalable now.
